JIA Services @ Networking Solution

JIA services offers wide range of IT services to any business small to medium in size.. Our services can be tailored according to client needs and therefore it's always a good idea to speak to one of our advisers for free consultation at start. We can talk you through our packages and mutually decide with you which suit your demands the best.

We offer a wide range of services including on-site and remote support, server builds, and managed services. Whether you are a small business startup looking for technical direction or a medium enterprise that needs us to team up with your local IT, we do it all.

1. Onsite Support

JIA Services has a full staff of network engineers available for a rapid response should you need on-site assistance. Sometimes, technology problems cannot be addressed through a call to our IT help desk so we quickly escalate your call and deliver a qualified engineer to your site to fix the problem so that you can focus on your business.

JIA's support team is able to resolve issues such as workstation and printer failures, infections, network and server problems.

2. Network Assessment

Whether you are looking to build a new network from the ground up or you are looking for an IT expert to review your existing strategy, JIA offers comprehensive network assessment services which provide customers with an in-depth look at their infrastructure.

Our trained engineers will review your business needs, technology objectives and inventory your existing hardware & software to devise a comprehensive hardware and software plan tailored to your current and future IT needs.
